Spendly v2: quick-add expense (lo-fi prototype)

Christos Salokanas · Week 4 · Redesign based on Week 3 finding: tracking has to be quick or students stop doing it

(1) Floating + button sits on every screen. One tap opens quick-add.

(2) Type the amount, tap a category. Tapping a category saves straight away.

(3) Confirmation, totals update. Done in 2 taps, under 5 seconds.

Why: Interviewee 1 stopped tracking because entering things by hand was boring; interviewee 2 kept tracking because it only takes minutes a week. Design goal: make tracking so quick students keep doing it every week. **Categories** shown are the ones both interviewees said they spend most on (food, groceries, transport, shopping).
